# Case Study
## Law Firm - SharePoint

## Business Challenge

The legal field is very document-centric and most lawyers at this firm spend their day working in Microsoft Office Outlook and other Microsoft Office applications. Documents related to cases and communication with clients must be handled in accordance with standards for confidentiality, and all information must be managed through defined lifecycles. Adding to the complexity, attorneys and staff need to collaborate from multiple locations around the globe, requiring access to the same information.

Our client, a leading U.S. Law firm, wanted to customize and deploy the new SharePoint portal solution integrated with Active Directory. Our client was migrating from an outdated, disorganized intranet environment to a SharePoint portal solution. They wanted a law firm specific solution that can be paired with SharePoint for a speedy, thorough implementation that will address their stakeholders' requirements and expectations, including being up and running inside a very short time frame.

## JIVA's Solution

JIVA has expertise in developing solutions with many significant advances that are critical to the continuing success of a progressive law firm, in terms of the practice of law and the business of law, and also in terms of leveraging the expertise and professional development of individual lawyers and staff.
We offered a dynamic database management system that is easily customized by non-programmers and MOSS experts alike, empowering the client to evolve the data architecture as needed.

## Results & Impact

Moving from a Lotus Notes-based intranet portal to a SharePoint portal allowed our client to increase functionality, reduce their development and maintenance efforts, and integrate their portal with Active Directory. We delivered an out-of-the-box solution that matched our client's most aggressive operational timeline.
